

Managers Report 1

/25/2010

Ski dock posts and joists are in at the marina. Will be doing the handy cap dock at the marina next. Did some repair on lodge docks to get them through for another year or two?

Had to replace two rims and studs on new dump other wise its doing fine.

Trash figures are pretty well in. Have got two bids in for toters or can be called wheeled trash cans have one in our office that a bidder sent us.

Got bids in for new signs to mark the streets it will help Fire and EMS to find there way around maybe we will not see deliverer trucks driving all around trying to find addresses In Lakengren.

Marina prints should be back any time had to send electric and plumbing drawings to them to be added to plans. I will have to find someone to draw HVAC prints they will need to be engineer stamped prints from a mechanical engineer.

Hopefully we can keep the ice down on the main lake from rain till it's gone it will take docks out if the rain comes to fast.

Lakengren cove was a mess more than likely there was to much dust in the rocks that we put on the top of the twos which is baseball size rocks went back on Tuesday morning and put course crushed rocks and then chips and dust to get rid of problem seems to be ok at this point. No none of the other gravel roads had this problem.

Ice storm cost us about 1,400.00 dollars in salt supplies. Amazing enough don't know of any wrecks from ice. Some slide offs butt most of them was off then- driveway.
